Finish Information

All our fixtures are made from solid brass and copper. Because most of our exterior fixtures are unlacquered, with the exception of CV and RT, the finishes will start to oxidize once exposed to the weather. Both brass and copper finishes will darken, but unlike brass, copper will verde. This process is accelerated by several factors, including but not limited to the acidity of rain, other air pollution, the exposure to UV light and proximity to the ocean. If you do not want your fixture to oxidize, we would suggest requesting a lacquer coating which will retard the oxidation process for a period of time.

Following is a list of finishes we offer:

RWB = RAW BRASS	ORB = OIL RUBBED BRASS
RWC = RAW COPPER	ACV = ANTIQUE COPPER VERDE
AB = ANTIQUE BRASS	CV = COPPER VERDE
AC = ANTIQUE COPPER	RT = RUST
DAB = BLACKENED BRASS	PB = POLISHED BRASS
DAC = BLACKENED COPPER	PC = POLISHED COPPER

-RWB and RWC do not have a coating over the finish and therefore will darken.

-AB and AC are oil-rubbed finishes. The oil protects the finish during shipping. Once the oil evaporates, the finish will start to darken. To prolong the finish, we suggest rubbing the fixture periodically with light-weight motor oil.

-DAB and DAC do not have a coating over the finish. The metal is darkened to a dark charcoal color.

-ORB is an oil rubbed finish. The finish is a deep, rich brown color. The oil protects the finish during shipping. Once the oil evaporates, the finish will start to darken. To prolong the finish, we suggest rubbing the fixture periodically with light-weight motor oil.

-ACV does not have a coating over the finish. The copper metal is darkened and then spots of verde are applied.

-CV and RUST have a light coating of lacquer applied. The copper metal is darkened to a charcoal color and then a chemical wash is applied. The CV looks like a green wash and the RUST looks like a wash of browns, yellows and golds.

All our finishes are hand-applied; therefore, variations will occur.
